

How to

CMACT VC-MDx

VM-Licensing

Voice Recording System

VC-MDX

Version 2101

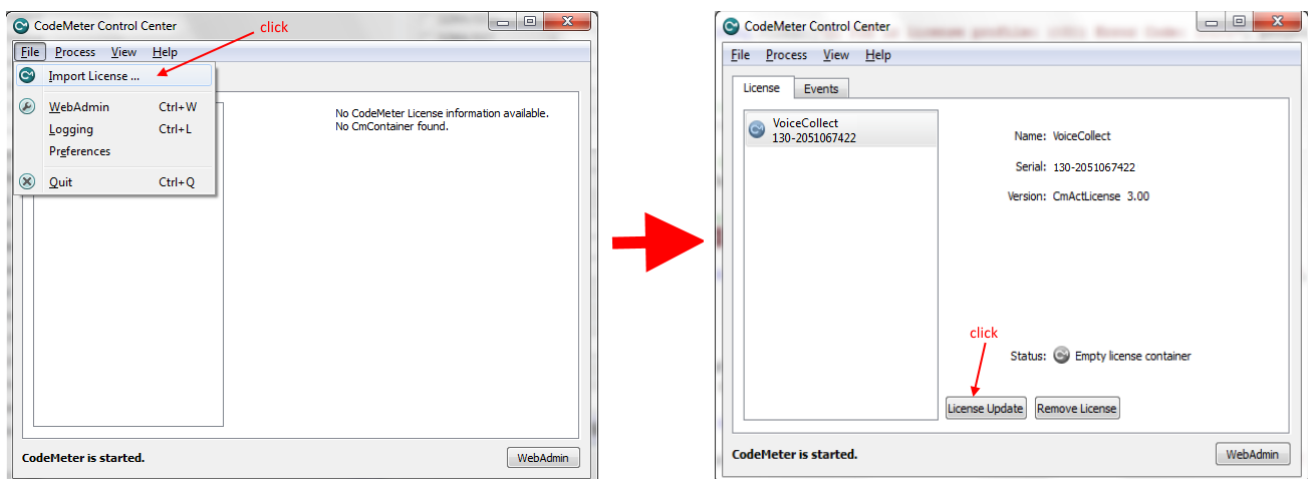

VM Licensing

1. Preliminary information

The pictures in this guide may differ from the software, they are for illustrative purposes only. Please consider this guide as a general document in the aim of supplying a basic understanding of the software functioning.

2. Importing License file (LIF)

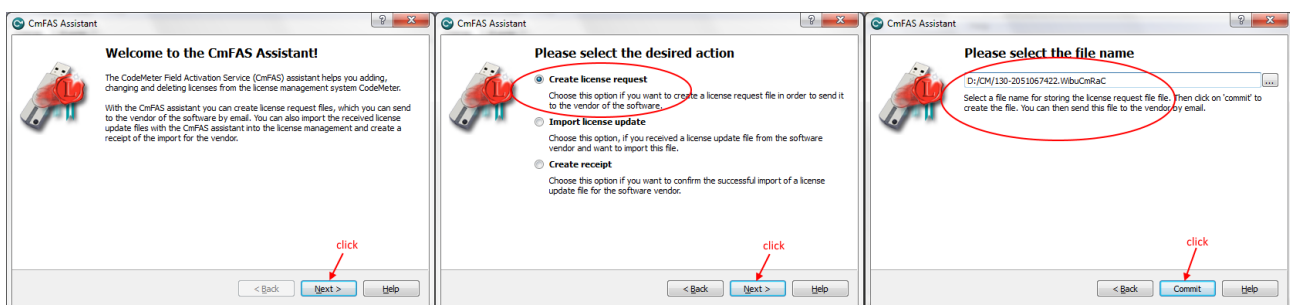

Import the “VoiceCollect.WibuCmLIF” file in “CodeMeter Control Center”.

Alternatively one can just drag&drop the “VoiceCollect.WibuCmLIF” file into the CodeMeter Control Center window.

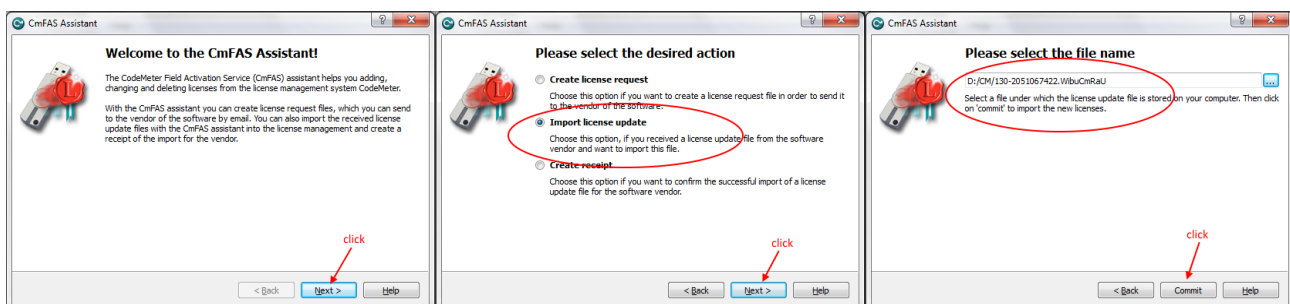

3. Update license request

Click the “License Update” button in the CodeMeter Control Center window and follow the steps in the CmFAS Assistant, create a “*.WibuCmRaC” file (in our example “130-2051067422.WibuCmRaC”) and send it to ATIS UHER S.A. (mailto: sav@atisuher.ch) with our order number (example: AB-06590).

4. Importing the License Update file

Based on your request, we return an “*.WibuCmRaU” file (update file). Execute again the “CodeMeter Control Centre” and select again “License Update”, like in step 3. Then, in the CmFAS Assistant, select “Import license update”, select the update file received and click “Commit”. It’s also possible to „Double-click“ on the file to update the license:

Step 4 ends the licensing process.
